

### Presentation

The **Italian Journal of Agrometeorology (IJAm - Rivista Italiana di Agrometeorologia)** aims to publish original scientific contributions, rather in English, but also in Italian, on agrometeorology, as a science that studies the interactions of hydrological and meteorological factors with the agricultural and forest ecosystems, and with agriculture in its broadest sense (including livestock and fisheries).

**Since 2013 the journal obtained the recognition in ISI - Web of Science and consequently the Impact Factor.** The Impact Factor will be given to the journal, calculating it on citations occurred over 2013.

Among the areas of specific interest of the journal there are:

- **ecophysiology;**
- **phenology;**
- **plant growth, quality and quantity of production;**
- **plant pathology;**
- **entomology;**
- **welfare conditions of livestock;**
- **soil physics and hydrology;**
- **micrometeorology;**
- **modeling, simulation and forecasting;**
- **remote sensing;**
- **territorial planning;**
- **geographical information systems and spatialization techniques;**
- **instrumentation to measure physical and biological quantities;**
- **data validation techniques, agroclimatology;**
- **agriculture scientific dissemination;**
- **support services for farmers.**

Each paper is subjected to critical evaluation and review by [Field Editors](#) with specific expertise in the different areas of interest and by the members of the international [Editorial Board](#)
